

ABSTRACT

5           A web-based portal includes portal pages registered  
within a web-based architecture, and navigation options  
linked to different ones of the registered portal pages. A  
display of registered portal pages is provided as follows.  
A server provides, to an access device, information to  
10 provide a display of a selected first registered portal  
page that includes a hyperlink to a second registered  
portal page. The display of the page is provided within a  
displayed navigation framework that includes a navigation  
menu for user selection of navigation options. In response  
15 to receiving an input indicating user selection of the  
displayed hyperlink to the second page, the server provides  
to the access device 1) information to provide a display of  
the second registered portal page within the displayed  
navigation framework, and 2) information that causes the  
20 navigation menu to emulate a selection of a navigation  
option linked to the second registered navigation page.
